STATISTICIAN'S REPORT

Mr. Charley L. Burkett, President, and Fellow Firemen of the North Carolina State Firemen's Association:

I herewith submit to you my report of statistics for the fifty-sixth year of our Association.

During the past year since our Association met in Greensboro our nation has been struggling under the ALL OUT WAR of World War II. We have seen once more what war can do for a peace loving people. History has been made many times during this period and our fighting forces have made history that will stand forever.

The soldiers on the home front, THE FIREMEN OF THE NORTH CAROLINA STATE FIRE ASSOCIATION, have also made history that will go down in the war time records in fighting the FIRE DEMON, who has as his accomplice that Black Traitor—WAR SABOTAGE.

FIRE PREVENTION WEEK: Fire Prevention Week of October 4-10, 1942 was once more a week of real activity throughout the entire state. Rocky Mount has been named the first city in North Carolina in Fire Prevention Week activities. Gastonia was named for second place, and honorable mention went to Lenoir, Asheville and Wilmington. As compared with cities in the whole United States, Rocky Mount stood thirty-sixth and was awarded a merit grade of between 80 and 90 per cent. The reports submitted represented 1,172 cities from the United States, Alaska and Canada.

FIRE COLLEGE AND DRILL SCHOOL: Your annual Fire College and Drill School was held in May with the city of Charlotte as our fine host. The school was well attended, much was accomplished and never was a keener interest exhibited. There were 350 firemen in attendance representing 90 cities and towns and industrial plants, and as many fire departments. The United States government had men from the following camps and bases for instruction and to gain knowledge in modern fire fighting in war times and how to handle incendiary bombs: United States Marine Air Base, Cherry Point, United States Anti-aircraft Firing Range, Camp Davis, United States Camp Sutton, United States Quartermaster Corps, Charlotte, Camp Butner, Durham, Seymour Johnson Flying Field, Goldsboro, Fort Bragg, Fayetteville, Raleigh-Durham Air Field and Laurinburg-Maxton Air Base. The North Carolina Insurance Commissioner, William P. Hodges was in attendance and made an inspiring speech which was enjoyed by all.

Your statistician wishes to pass on to you the contents of a letter written to the North Carolina Insurance Commissioner from the Secretary-Treasurer, Daniel B. Tierney, of the International Association of Fire Chiefs. The letter, I am sure, is self explanatory and every fireman of North Carolina should be more than proud to have a man like Sherwood Brockwell as his Fire College and Drill School instructor.

International Association of Fire Chiefs
8 Robbins Road

Arlington, Massachusetts

Insurance Commissioner William P. Hodges
State House
Raleigh, North Carolina

Dear Commissioner:

President Callahan of the International Association of Fire Chiefs,

Chief Mitchell, Fred Shepperd and I were greatly impressed with the splendid class conducted for the firemen of North Carolina by Fire Marshal Sherwood Brockwell in Charlotte which we witnessed in our recent visit.

It was a revelation to us who are familiar with Firemen Training Programs to see a class handled so expertly and efficiently. In our opinion it is the outstanding one in the entire country. The college, drill yard and complete set-up are ideal. The large number in attendance, the keen interest and excellent deportment while in class were extremely edifying and it must be a source of pride to you, Chief Palmer, Chief Brockwell and all others to know that your efforts have been richly rewarded.

We need Sherwood Brockwell on our educational program for the Conference of the International Association of Fire Chiefs in Chicago, August 31, September 1-3, 1943, and President Callahan requests that you delegate him to attend that Conference.

With kindest regards, I am

Cordially yours,

(Signed) DANIEL B. TIERNEY, Secretary-Treasurer.

Your Educational Program Chairman Sherwood Brockwell has conducted many meetings in cities and towns in all parts of the state during the past year. These included meeting with the Roanoke River Association and the extraordinary meeting of the East Carolina Fire Association held at Greenville, North Carolina, in April at which time the new Greenville Fire Station and Drill Tower were dedicated. It is reported that practically every city and town in the state have set up a corps of auxiliary firemen and have them well trained for any emergency.

I have once more this year, with the cooperation of Mr. Brockwell and the Insurance Commissioner's office, made another complete summary of the fire fighting equipment as reported to the Insurance Commissioner's office. This report represents 176 cities and towns with a combined population of 1,132,467 (1940 census) men, women, and children who are being protected by the firemen of the North Carolina State Firemen's Association.

When we compare the equipment for 1942 with that of 1941 we are happy to note such a nice increase, especially when we consider how hard it is to make purchases and how slow the deliveries have been, due to the war conditions.

In spite of many of our firemen having answered the call to arms and many cities and towns not having their usual number of

firemen other cities and towns have increased their personnel and others have replaced those who answered the military call.

Your equipment consists of 12 aerial trucks, 33 ladder trucks, 73 auto hose trucks with a capacity of 63,200 feet of hose space, 86 hand reels with 35,100 feet of hose capacity, and 300 combination pumpers with a combined pumping capacity of 193,150 gallons of water per minute, 609,950 feet of 2½-inch fire hose, new or in first class condition. The total number pieces of motor apparatus is 419 and the total investment of all equipment is \$3,618,218 with a per capita investment of \$3.19.

When the year of 1942 is compared with that of 1941 we should be thankful for the improvement made in the fire fighting equipment. You have increased aerial trucks by 2, ladder trucks 2, auto hose trucks 11, and combination pumpers 10, with an increased pumping capacity of 8400 gallons per minute, and 25,450 feet of 2½-inch fire hose. You have increased your total value of all equipment \$163,462 with an increase of only 14 cents per capita investment.

STATE FIRE LOSS: The losses reported paid by insurance companies to the Insurance Commissioner for 1942 were \$4,684,396. The formula generally used by the National Board of Underwriters to determine the National Fire Loss is to take 30 per cent of the amount actually paid by all insurance companies, exclusive of automobile insurance, and add to the actual insurance paid. The 30 per cent of reported insurance is \$1,405,318 and added to the \$4,684,396 thus makes a total loss of insured and uninsured of \$6,089,714.

Based on the formula and figures above a per capital loss for North Carolina for 1942 and on the estimated population of 3,809,731 would be \$1.59. This is only 2 cents per capita increase over 1941 which is gratifying when we take into consideration that the figures listed for North Carolina and the estimated population of the state do not include the vast number of people of all races who came into the state during the year of 1942. These newcomers are engaged in war work of various kinds and capacities thus creating living conditions with subsequent fire hazards never before experienced in our cities and towns.

PUBLIC SCHOOLS: The firemen of North Carolina are well aware of the number of fires that have been in public school buildings in the state in recent years. Many of these fires have been in rural districts and in many cases have received aid from your various fire departments. A representative of the North Carolina

State Firemen's Association has made recommendations and assisted in preparing a special report which has been presented to the recently created State Board of Education.

These recommendations include the following:

1. Removal of all shops, wherever and whenever practicable, from school buildings already erected and placing such shops in separate buildings removed from regular buildings.
2. The same for Home Economics classes using kerosene, gasoline and or kindred products in cooking, cleaning, etc.
3. Designing all school buildings erected in the future except those of approved Fire Resistive Construction throughout, so that shops, brooders, home economics class rooms using highly inflammable vapors, gases and heating appliances be taken care of in separate buildings removed from the regular school buildings.
4. That the use of school buildings be limited during school year and during time when not regularly occupied to school purposes only.
5. That all furnaces and fuel room areas be properly segregated from remainder of such buildings and kept so.
6. That all trash chutes and other openings between floors of school buildings be eliminated and prohibited in new buildings.
7. That whereas the state of North Carolina has millions of dollars invested in school buildings, each superintendent and each principal be instructed to see that all trash, debris, and like matter be removed from school buildings each day before he or she leaves such building and that if the school is equipped with electric and or gas appliances that main switch controlling same be pulled before such superintendent and or principal leaves building.
8. That each city school system and each county school system have employed a responsible person whose duty shall be to go from school to school to see that fire dangers are not allowed to exist.
9. That school authorities in the counties, cities and

towns seek cooperation of police and other law enforcement agencies to the end that all school buildings be better policed at night, week ends and vacation periods.

10. That legally required exit areas be utilized for no other purposes.

11. That the practice of locking outside doors during school hours be discontinued.

12. That the facilities of the nearest fire department be utilized by school officials in any matter pertaining to fire protection.

NATIONAL FIRE LOSS: Industrial fires in the first four months of 1943 equals the entire industrial fire total for 1942. While authentic date on the fire loss for the United States is so far unavailable, such information as your statistician has been able to secure shows a decided uptrend, as illustrated by release of the United States Chamber of Commerce July 1, 1943. The fire losses in 1943 thus far have shown an alarming upward trend in industries providing or storing war materials and essential civilian supplies. For the five months ended May 31, 1943, the total fire losses for the United States as estimated by the National Board of Fire Underwriters reached \$163,000,000 (one hundred sixty-three million) or more than \$15,000,000 (fifteen million) increase over the same period of 1942. These figures are entirely outside of the toll of thousands of lives lost and many thousands more disabled by that **DEMON—FIRE**.

FIRE TOLL: Preventable fires and explosions take a toll, not only of property, valuable furnishings, family portraits and paintings, irreplaceable heirlooms, clothing and important documents, but a disastrous toll of human life. The United States Census Bureau figures indicate that between 1933 and 1937, total fatalities from fires numbered 40,140 persons, of whom 13,789 were children whose ages ranged from 4 to 14 years.

In conclusion I again wish to express to our friend Sherwood Brockwell and the office of the Insurance Commissioner my sincere appreciation for the 100 per cent cooperation and their time they have given me in helping secure the information necessary in compiling my reports.

Respectfully submitted,

ALBERT W. BRINSON, Statistician.

(See next page for statistician's table).

ABSTRACT FROM STATISTICIAN'S REPORT 1943
Summary of the Fire Fighting Equipment in Various Cities and Towns of the State of North Carolina as Reported to the Insurance Commissioner as of October 1, 1942.
